=====  
Priority Justification and State Comments Regarding:

X PA    SI    Follow-up SI    RPS    HRS

MEK, Agitene and compound cleaning liquid are used for cleaning of printing and roll coating equipment. They are a small quantity generator under RCRA.

The spent solvents are properly documented, stored, and shipped to Reclaimed Energy.

RCRA inspections indicate that the facility is properly operated, in addition, perimeter inspections by CERCLA personnel indicate that there does not appear to be any apparent problems outside the facility's boundaries.

Peck Inc. has reduced their use of these solvents significantly over the last three years.

I can see no significant danger to the public health or the environment from this facility.
